Hobbies: Karate (Tang Soo Do and Hapkido), history, philosophy, education, public speaking, overseas travel, exotic dancing.
Sundry: I was married to the gal that you guys met at the last reunion (may her name ever be forgotten and may the little children spit on her shadow, ptooh, ptooh) for 8 years. Soon after the divorce was finalized, I met my current wife and life is *way* better than it was last time. She brought two kids with her, Tommy, who is a challenge due to many developmental problems, and Veronica, who is a smart kid with considerable artistic talent. (She's also a pain in a delicate part of the anatomy, but that goes with being 13.)

My current job is to do physics research, go to conferences and present the results, give talks to the public on modern research topics, etc. To date, I've given talks in Russia, Japan, Italy (twice) and France and, of course, all over the US. I was supposed to go to India, but the U.S. government didn't like them at the time over the little explosion that they did, so I didn't get to go there.

I spend most of my time trying to learn everything I can. I read as often as reality allows me. Basically, life is pretty good.
